

IN THE SPECIFICATION

Please replace the paragraph beginning at page 50, line 18 through page 51, line 3,
with the following rewritten paragraph:

d (3) Since a porous [[an]] and inorganic material is used for the inner walling at the wall parts and ceiling parts, in accordance with differences in humidity between the outdoor air and indoor air, vapor in air inside the inner walling can be condensed, and moisture condensed inside the inner walling can be discharged into the inside air as vapor. Thereby, the indoor humidity can be automatically adjusted, and the indoors can be maintained at a stable humidity and a comfortable humidity environment can be realized.
